To Whom It May Concern,

I am pleased to write a recommendation for Mr. Raul Ciurescu, who is a member of the research and development team of DSPLabs part of the Department of Computer and Information Technology of Politehnica University Timisoara.

I consider Raul Ciurescu to be very skilled in embedded systems. Through his involvement in embedded projects such as a Morse Code Interpreter on an STM32F4DISCOVERY board with an ARM-Cortex M4 microcontroller and a Maze Solver based on a robotic kit and the same development board, he exhibited implication, determination, diligence, and intelligence. During this time, it became evident that Raul Ciurescu is very perceptive, hard-working, and oriented to problem-solving, which recommends him as a future engineer.

Raul Ciurescu has great potential to do things very seriously. This is not only because of his natural abilities but also because of his attitude towards work. He is passionate about his work and about learning new practical and theoretical aspects of embedded systems and engineering.

I truly believe that a proper working experience will give him the necessary means to grow and realize his potential.

Sincerely,

Cristina Stângaciu
